CCTV TECHNICAL COURSES

The CCTV industry is a world of endless change and rapid evolution. To keep pace with these developments, our flagship Foundation CCTV course is constantly updated and this year, as always, it remains right at the 'cutting edge'. It's content is a perfect introduction for those who are entering the industry for the first time and is an ideal refresher for experienced professionals who need to move forward from older more traditional technologies.

COURSE CONTENT

- ▶ The fundamentals of analogue and digital CCTV
- ▶ The importance of an Operational Requirement
- ▶ Surveillance Camera Code of Practice
- ▶ Selecting the best camera and lens combination
- ▶ Lighting and how to measure it
- ▶ Displaying best images for CCTV applications
- ▶ Digital storage and retrieval
- ▶ Transmission methods: Optical Fibre, coax, twisted pair, and free space
- ▶ Using test equipment, meters and tools
- ▶ Setting up IP and analogue CCTV systems
- ▶ Health and Safety, Working at Heights and electrical safety

Excellent presentation. I wish I had done this course years ago.
